SI EXPLORER - "DRAG AND DROP"

**Submitter:** RICHARD (RICK) HATCHER

**SI Recommendation**

**Additional Notes**

**Explanation of Problem/Requirement**

Right now you can "drag and drop" .sec files from folder to folder within SI, you can "drag and drop" files into SI from the desktop, but you cannot "drag and drop" out of SI to the desktop. The only way you can get a .sec file out of SI is to e-mail it to yourself.

**Board Comments**

**Submitter's Recommendation**

I want to request the ability to "drag and drop" .sec files to the desktop (and maybe to/from Windows Explorer) directly out of SI.

(Maggie) - If this is not do-able, possible right-click on the section and select "send to."

Printable Tailoring Option List

**Submitter:** ALICE BUTLER

**SI Recommendation**

**Additional Notes**

**Explanation of Problem/Requirement**

Admin. folks NEED to be able to print the tailoring list shown for the job so the engineer can mark the selections needed.

This has appeared in several classes when we introduced the tailoring concept.

**Board Comments**

Low Priority

**Submitter's Recommendation**

Generate a printable list of Tailoring Options for each Section of the Job, much like the Screen that comes up when you bring up the Tailor Job window.

07-008                      SpecsIntact Installation Not Requiring A Previous Install

**Submitter:**    JIM WHITEHEAD

**Explanation of Problem/Requirement**  
Our NAVFAC customers cannot install SpecsIntact due to NMCI restrictions, and more of our customers will probably soon face similar restrictions. Some NAVFAC users who have had a previous SpecsIntact installation can run the current version of SpecsIntact without a new installation, but other NAVFAC users cannot do this. The Citrix version of SpecsIntact that the latter group is forced to use performs unacceptably slow. Solving this problem for NAVFAC helps secure future SpecsIntact funding. We have already lost some of our NAVFAC funding, and are in danger of losing all of it if our NAVFAC customers cannot use SpecsIntact. Having a product that many of our NAVFAC customers cannot use undercuts our goal of expanding the use of SpecsIntact for NAVFAC Design-Build projects. If our customers cannot use our product, they certainly will not expand their use of it.

07-009                      Customizable Initialization File Location

**Submitter:**    JIM WHITEHEAD

**Explanation of Problem/Requirement**  
Many users cannot write to their Windows folder, but this is still our default location for our Supplemental Reference file and our SI .ini files.

07-010                      Make Processed Files "Read Only"

**Submitter:**    MICHELLE GARCIA

**Explanation of Problem/Requirement**  
Customers are accidentally editing their Processed files, causing them to lose all changes upon Processing again.

**Board Reviewed - Nov 01, 2007**

**SI Recommendation**

**Board Comments**

**Version:**

**Change was:** ACCEPTED

**Additional Notes**

**Submitter's Recommendation**

Make the Processed files Read-Only so that no changes can be made to them to avoid confusion.

07-011

Identify Revisions for Each User

**Submitter:** MEGAN GOTTLIEB

**SI Recommendation**

**Additional Notes**

**Explanation of Problem/Requirement**

When using Revisions in SI, it is not identifiable who made the changes when more then one user is editing a Section. I would be nice to be able to see who made the changes and when.

**Board Comments**

Too costly

**Submitter's Recommendation**

Add a feature similar to MS Word in which each users initials are added to a comment box when hovering over the Revision.

Add An Option to Remove Footer from the TOC

**Submitter:** STEVE PRICE

**SI Recommendation**

**Additional Notes**

**Explanation of Problem/Requirement**

When Printing the TOC, the default footer shows up, regardless of whether or not you have information in the Header/Footer dialog box in the Process/Print/Publish window. It is hard coded in to the Processing.

**Board Comments**

**Submitter's Recommendation**

Please add an option to remove the footer on the TOC.

07-013

Make all Dialog Boxes Resizeable

**Submitter:** DAVE EVANS

**SI Recommendation**

**Additional Notes**

**Explanation of Problem/Requirement**

The full path of the directory is not visible in the Working Directories dialog (and others). This situation occurs in a number of dialog boxes, not just this one (such as the path pull-down in the Create New Job dialog).

**Board Comments**

Add slider to all boxes where Path is shown

**Submitter's Recommendation**

Make all dialog boxes re-sizable and add a sliders where long strings of data might be otherwise hidden. (Adding a slider alone or mouse-hover-pop-up alone are not recommended.)

Note: We have a similar approved CR for changing the size of the "Add Sections" dialog box. CR 04-029
